

PRAFUL DHOLARIYA, Backend Engineer

SKILLS

Python, NoSQL (MongoDB), SQL (PostgreSQL & MySQL), AWS clouds (services like EC2, Lambda and Cloud Watch), REST APIs (Flask, FastAPI, DRF), Django, Pytest, Pydantic, SQLAlchemy, Pandas, Neo4j, Celery, Django-Tenant, Google BigQuery, Docker, Postman, Git, Nginx

EXPERIENCE

PYTHON BACKEND ENGINEER,
DEVPUTERS.COM | FEB-2021 – PRESENT

PROJECTS

1 Health Care: Content Generation Project

Skills: FastAPI, Python, Postgres, Pydantic, SQL Alchemy, Pytest

Details:

- Designed and developed a FastAPI-based backend to handle file ingestion, user inputs, and document generation requests. Integrated the system with Azure Blob Storage to securely manage uploaded reference materials, outlines, and lexicon files.
- Developed a comprehensive testing framework using Pytest to validate the Python services, including unit tests for key functions and robust handling of edge cases.

2: Financial Audit Service Application

Skills: Python, MSSQL, SQL Alchemy, Pytest, Django

Details:

- Reviewed and converted existing Java code into Python for the financial audit service application. Implemented multi-database connectivity with dynamic database connections using appropriate design patterns in Python.
- Refactored the codebase by removing redundant code from existing Python services and developed a shared Python library to enhance code reuse and maintainability. Additionally, created a robust testing framework using Pytest to validate the Python services, including unit tests for core functionalities and edge case scenarios.

3: Connected IT, IoT, OT device Portal RestAPIs.

Skills: FastAPI, Python, Pydantic, Pymongo, Motor, MongoDB, Docker, Pytest

Details:

- Developed RESTful APIs using FastAPI, secured with OAuth2 authentication, for a portal connecting IT, IoT, and OT devices. Integrated MongoDB as the backend database using Pymongo and Motor for asynchronous operations.
- Designed and implemented a testing framework with Pytest to validate the FastAPIs, including unit tests for critical functionalities and edge case handling. Dockerized the application for consistent deployment across environments.

4: Credit Society Data Management

Skills: Django, Python, HTML, CSS, Google BigQuery

Details: This project involved the development of a credit society website that includes member login functionality, the ability to display individual ledger details, and options for members to download their ledger information as PDF files. The application was built using Django and integrated with Google BigQuery for data management.

5: Hotel Management System

Skills: Django, Python, HTML, CSS, nginx

Details: This project involved developing a Hotel Management System with features such as hotel login, reservation details display, and multi-language support. The system allows hotel staff to manage booking-related data efficiently through a user-friendly web interface.

6: Aadso Project

Skills: Python, Postgres

Details: This project focused on implementing a multi-tenant login system with integration to Microsoft Active Directory. It supports login functionality tailored to each tenant through schema-based isolation.

PAST EXPERIENCE

COMPUTER INSTRUCTOR, KV AFS NALIYA | APR-2016 — JAN-2021

- Taught computer science subjects in six to ten classes.
- Maintain Organization Website and other IT related work.

HEAD OF TECHNICAL DEPARTMENT, SARVODAYA EDUCATION NETWORK | JUN-2012 — FEB-2016

- Taught computer subject in ten class.
- Worked with IT team to manage edit workstations, technical problems and post production infrastructure.

EDUCATION

Bachelor of Computer Application (B.C.A) Gujarat, India, Saurashtra University, 2009 – 2012
